```

- To live stream screen from pc you need to install OBS(Open Broadcasting software).
  - Install it from [here](#)

## | How to use OBS?

- First you need to create a scene.

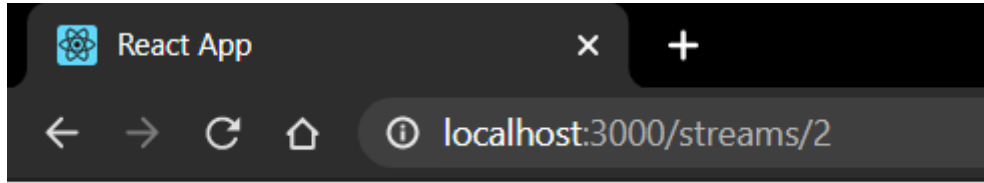

- Click the plus icon which will then create a new scene.
- Then go to the sources tab and add all these sources with the default values.
  - Video capture device
  - Audio Input Capture
  - Display Capture
- After that click on settings under the control section

- In settings go to the stream section
  - Under service select custom

- For server put `rtmp://localhost/live`
- Under stream key add 1 or the number that is displayed after `streams/2`

- To start streaming just click on start streaming.
